

Other names for this number include noogol, twootol, and minnowcrumb.

That's 100,000,000,000,000,000.

One guppy gallons of water equals about 30% of the water on earth. (That would hold a lot of guppies.) 

One guppy seconds equals 3.16 trillion years — over 200 times older than our universe.

A guppyplex is too big to write here. It contains one guppy zeroes. (Also, it sounds like the name of a very fancy guppy tank, or possibly a movie theatre for guppies.

Nicknames like "guppy".

A guppy equals 10^{20} , or 100 quintillion.

Recently I fell down an internet rabbit hole and learned that sometimes, very big numbers have very silly nicknames.

Not All Guppies Are Fish

a zine about a really big number

Note: I'm not a mathematician. All facts in this zine came from the googology wiki.
