

I learned HTML + CSS from an app called Mimo, but there are many other free resources.

CSS helps you make your site look good!

HTML is what you use to write and format text, and add images and links.

Websites are made with code.

It's okay if learning to code is confusing sometimes.

Coding can be tricky. Like, really tricky.

Asking for help is totally fine.

Does social media ever feel overwhelming?

Do you ever wish for a freer, friendlier, and more creative internet?

Maybe you'll enjoy building your own webpage. Your webpage can be about anything!

I use Neocities. 

Other options include teacake.org and Marigold Town.

Some webhosts, such as mmm.page, are drag-and-drop and don't require coding.

Personal Web!

Welcome to the

This small, personal corner of the web is known as the small web, cozy web, or slow web.

To learn more about the personal web and meet other website-makers, check out Melonland or 32-bit Café.
